

## Beginner-Friendly API Projects:

- News Aggregator: Use a news API (like News API) to fetch headlines and articles, then build a website or app that displays and filters the news.
- Weather App: Utilize a weather API (like OpenWeatherMap) to display current weather conditions for a specific location or multiple locations.
- Dog Facts App: Use The Dog API to retrieve and display fun facts about dogs.
- Agify API Project: Use Agify API to predict a person's age based on their name.
